

Data Flow Diagram — Member Portal Modernization

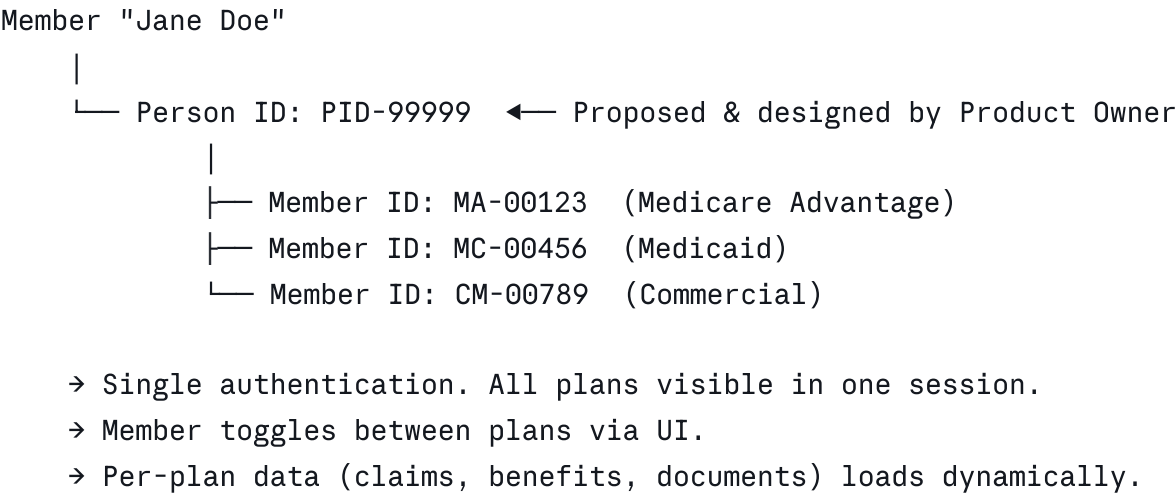

Universal Person ID Architecture

The core architectural innovation in this project was the Universal Person ID — a backend identity layer that linked fragmented plan-specific Member IDs to a single person record.

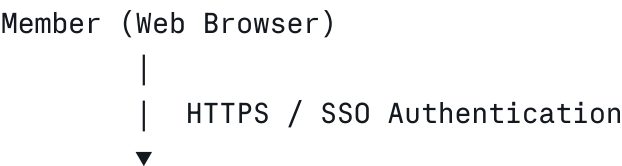

BEFORE: Fragmented Identity Model

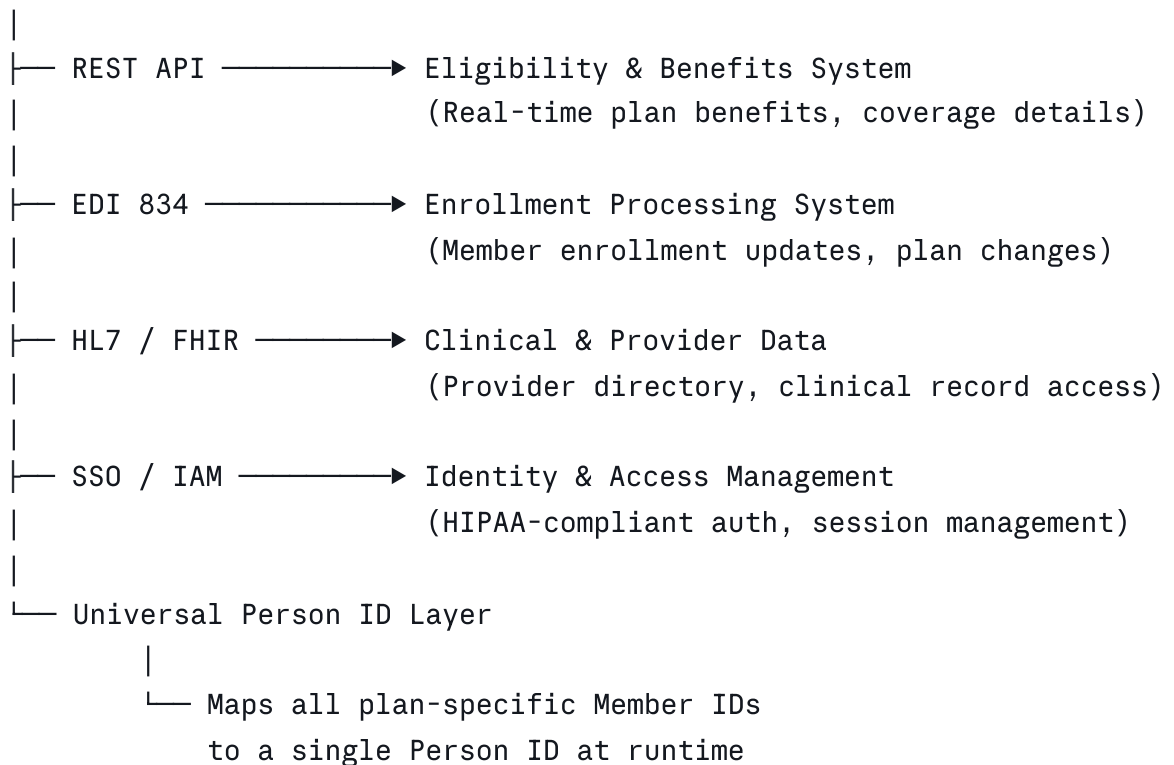

AFTER: Universal Person ID Model

Portal Integration Architecture

Member Portal (New Vendor Platform)

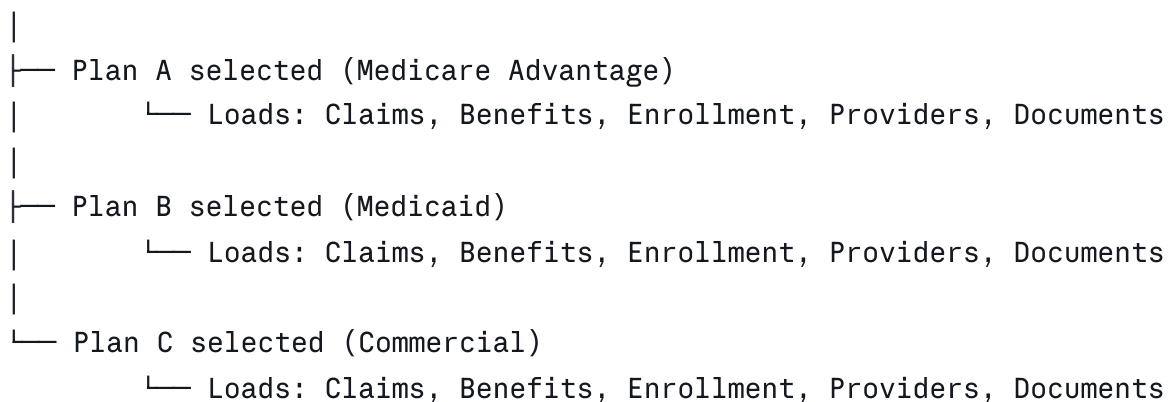

Plan Toggle Data Flow

Member authenticates → Person ID resolved

Portal loads all Member IDs linked to Person ID

Each plan's data fetched dynamically via REST API using plan-specific Member ID. Person ID is the session anchor – Member IDs are the data retrieval keys.
